

Pesticide

By Lambert M. Surhone

Betascript Publishers Dez 2009, 2009. Taschenbuch. Book
Condition: Neu. 220x150x9 mm. Neuware - Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. A pesticide is a substance or mixture of substances used to kill a pest. A pesticide is any substance or mixture of substance intended for: - preventing, destroying, repelling or mitigating any pest. A pesticide may be a chemical substance, biological agent (such as a virus or bacteria), antimicrobial, disinfectant or device used against any pest. Pests include insects, plant pathogens, weeds, molluscs, birds, mammals, fish, nematodes (roundworms), microbes and people that destroy property, spread or are a vector for disease or cause a nuisance. Although there are benefits to the use of pesticides, there are also drawbacks, such as potential toxicity to humans and other animals. 152 pp. English.
